Our client is one of the global top suppliers of crop protection solutions for agriculture and special crops. The company’s portfolio also includes biologicals, fertilizers and other products for modern plant cultivation. Our client has a R&D pipeline well-filled with new and innovative products.

What you can expect:

• Coordinate project registration activities for crop protection products
• Prepare documents for regulatory authorities
• Project management to maintain scope of projects, timelines and budgets
• Exchange regularly with sales and technical departments
• Monitor development of relevant legal framework
• Attractive salary

What is required:

• University degree in biology, microbiology, chemistry or comparable qualification
• Relevant professional experience with EU regulatory processes
• Self-motivated and committed with the ability to work in a team
• Ability to maintain attention to details, and prioritize and meet deadlines
• Excellent language skills in English and German
• Willingness to relocate within Germany
