<b>Course Content</b>
Principles of analytical processes from in situ measurements, sampling strategies to laboratory analysis in hydrochemistry. Practical application of standard techniques in hydrochemistry, data analysis and environmental interpretation.
<b>Learning Outcome</b>
Knowledge of hydro-chemical in situ measurements, representative sampling and lab analysis techniques, possibilities and challenges, error sources and limitations of measurement techniques. Students are able to understand and carry out standard methods in hydrochemistry. They are able to understand the concepts of calibration, detection limits and error sources in lab analysis. They are capable of data interpretation and compilation of lab protocols and reports.
